

Whether you have lived in this beautiful state your whole life, just a few years, or only a few minutes...you already know how temperamental Colorado is!

Last week you could have mistaken Denver for Seattle, this weekend Denver felt like a mountain town, today it's bright and sunny and in a few days it's back to Seattle – what does all this mean to you?

Well, unless you're a Chamelon, you are going to need a heating and air conditioning system in your home that is fully functional and able to quickly switch back and forth between heating and air conditioning. Is your air conditioning system ready to go for our hot summer days that have been getting hotter and hotter over the past few years? During the month of May, Denver usually can get up to 70 degrees, June climbs to 81, July all the way up to 88 degrees – are you prepared for those scorching hot days?

Our family here at Steel T Heating and Air Conditioning suggests that you get your get your HVAC (heating, ventilating, and air conditioning system) serviced before the temperature gets unbearable. If your air conditioner is more than three years old, we also suggest that you consider getting it replaced. New HVAC systems are more than three times efficient than their older counter-parts, there are added tax credit benefits, and they are more energy efficient on your energy bills.

Having an efficient, fully functional heating and air conditioning system in this Colorado climate is essential. If you have any questions, we have a fantastic team of Certified Technicians that will assist you in any way possible. Give us a call today! 720-810-7633
